DETAILED ACTION

Claims 31-37 are directed to an allowable product, the restriction requirement as set forth in the Office action mailed on 12/13/05 is hereby withdrawn.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Daniel Stanger (Reg. No. 32,846) on 06/20/06.

The application has been amended as follows:

In a specification:

On the first front page, change the title of "A semiconductor module" to - - A power amplifier module - -.

Page 1, line 1, change "A semiconductor module" to - - A power amplifier module - -.

Page 1, line 3, change "a semiconductor module" to - - a power amplifier module - -.

Allowable Subject Matter

2. Claims 31-37 are allowed.

The following is an examiner's statement of reasons for allowance: the references cited disclose a module comprising a module board, first and second semiconductor chips, first and second conductive wires, and an insulating resin, for example, Shirakawa et al. (U.S. Patent 5,831,833 as in the record) discloses a semiconductor module comprising a board (10) having a support (11) and wirings, first and second chips (1, 20), first and second conductive wires (3), and an insulating resin (4), and an insulating resin, Nakaoka et al. (U.S. Patent 6,583,512) discloses a semiconductor device as shown in figure 17 comprising a sealing resin (35) covered first and second semiconductor chips (110, 120), and Arai et al. (U.S. Patent 6,741,125) discloses a high frequency power amplifier comprising a semiconductor chip including a final stage transistor (Q3). However, they do not disclose or render obvious in combination of a power amplifier module having the second semiconductor chip included a control-use transistor which control the final-stage transistor of the first semiconductor chip; a reference potential electrode formed on a lower surface of the second semiconductor chip; and the support on the module board is electrically connected with the reference potential electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nakaoka et al. and Arai et al. disclose related art.
